

Hello,

I sincerely invite you to enter into cooperation in the field of geodetic services, which can affect the performance of your work.

Modern equipment and experienced staff is the foundation of our business activity.

We have testimonials that confirm our skills and the precision of our work.

So far we have been executing large orders related to the construction of housing estates and commercial buildings, as well as smaller investments related to detached houses and road works, land management, maps.

We offer geodetic support for investments such as:

- construction staking,
- as-built site survey,
- geodetic service of construction sites,
- calculations of the earth mass volume,
- measurement of the usable area of buildings,
- geodetic service of engineering objects (prefabricated structures, gantry cranes, chimneys, piling)
- staking foundation slabs

### **LASER SCANNING - latest item in our offer**

By this method we perform:

- ARCHITECTURAL stocktaking of the facade and the entire building (tenement houses, office buildings, warehouses, etc.)
- measurement of the **USABLE AREA** (Both for residential and office space, storage, etc.) – A method particularly useful when selling apartments !!!
- checking and monitoring the verticality of walls (e.g. damaged structures)

The effect of the scan can be presented in the form of paper documentation or 3D presentation.

Scan results can also be used to create a virtual tour!

**Our offer is also complemented by classical geodetic services, which include:**

- base maps for design purposes,
- base maps for legal purposes,
- property divisions.

We encourage you to contact us.

Perhaps you would like to use our knowledge and skills.

**Best regards,**

**Maciej Radczyc**

**phone No.: 00 48 501 444 823**
